

Verifying Edit Issue Permissions

Introduction

This page will help you verify **Edit Issue** permissions. This permission is required for all issues in projects that were using the old P2 Connector in order for the **Import Associations** feature to function properly.

Step-By-Step Guide

The **Edit Issues** permissions can be verified by using the Permission Helper:

1. Type "."
2. In the dialogue box that appears, type "*Permission helper*".
3. Enter "*Salesforce & JIRA Cloud Connector*" as the **User** and "*Edit Issues*" as the **Permission**.
4. You should see something like this:

Permission helper

Discover why a user does or does not have certain permissions...

User
